

**Hong Kong Ladies Tennis League Ladies. We would love your help please !**

The LRC tennis community has launched an exciting CSR initiative to collect plastic tennis ball can “lids” to be recycled into prosthetic arms for children around the world including Africa and Asia as well as other disability aids.

e-Nable is a global organisation who have developed a technology to 3D print prosthetic arms for children.

Envision is the Australian “chapter” of e-Nable (based in Melbourne) who have developed a process to print the prosthetic arms from recycled Polyethylene. Envision are also developing processes to convert Low Density Polyethylene into disability aids. For example, they have developed a can opener and a clip which can be attached to wheeled-walkers to enable the elderly to clip walking sticks to the wheeled-walkers.

The LRC tennis community is supporting Envision by collecting number 4 tennis ball plastic lids, which means lids from all brands EXCEPT Head ie Dunlop, Slazenger, Wilson and Decathlon lids are all perfect. There will be a well labelled collection point by the Sports Desk and we encourage you to participate!

More information on Envision’s work, in particular the conversion of beverage caps into prosthetic arms for children can be found at the following link <https://envision.org.au/>

You can drop the lids off at the LRC or give to Michele Windsor or Margurite Hess and we will arrange to get them to Australia.
